## **I. PROJECT OVERVIEW**

Employee management is an important part of any organization, and it plays an important role in the organization's overall performance and success. Many organizations invest significantly in managing their employees and workforces, as HR is an important part of any organization and responsible for the success of an organization. Organizations invest highly in the management of employees. [1] Every organization keeps its employee/staff records, because these records are essential in managing their employee information, in evaluating their performances, and in supporting their decision-making processes [2]. However, managing these records manually or across separate systems is a challenging and time-consuming task for the HR staff and managers. This can lead to inefficiencies, data inconsistencies, and difficulties in accessing important information when needed. [3] To address these problems, many organizations implement an employee management system or HRIS that centralizes employee data and HR processes efficiently.

Many studies indicate that the implementation of employee management systems is an essential element in improving organizational performance and productivity. Jahmani et al. claim that effective employee management is positively associated with organizational performance, influenced by factors such as organizational structure, systems, and work environment on employee outcomes. [4] In the same way, a different study from 2022 highlighted the need to digitize employee management processes, focusing on matters such as task management, communication tools, and the way well organizations function together and are efficient. [5] Farzana (2023) and other studies supported these claims. They found in their study that employee management systems help make administrative duties simpler, keep data in a central location, and reduce the number of mistakes, which all lead to better overall operational efficiency. [6]

The Employee Management System, also known as a Human Resource Information System (HRIS), is a web-based application designed to manage and organize employee information within an organization. In many workplaces, tasks such

as maintaining employee records, tracking attendance, and managing leave are often performed manually or via separate systems, which can create inefficiencies and inconsistent data. This system addresses these issues by providing a centralized platform where Admin, HR staff and managers can record employee details, assign employees to departments, record a department's information, and monitor attendance, including tracking late entries. It also supports leave management, allowing employees to submit leave requests and view their status, while managers can review, approve, or reject requests.

The employee management system offers reporting features that allow employee directories, attendance summaries and tracking, leave request reports, department-based reports, and monthly HR activity summary reports. This system is developed using a Laravel framework, following the MVC or model-view-controller architecture. This system is organized into structured components for better maintainability and scalability.

In conclusion this system can aid and improve the organization overall employee management as this system offers an employee management system that improves the organization and management employee records, attendance tracking and monitoring, leave processing, and managing department information and assignments, making hr, manager, employee operations efficient and manageable.

## **II. OBJECTIVES**

### **General Objective**

To develop a web-based application, an employee management system (HRIS) using the Laravel framework that efficiently manages the employee information, attendance records, leave requests, and department assignments and information in a centralized and organized system.

### **Specific Objective**

- To manage employee information and the structure of the organization by letting users create, update, and store employee profiles, and by assigning employees in their appropriate departments and positions.
- To track an employee's attendance and work status through recording employee attendance time in and out, as well as monitoring the attendance status of each record, such as late, present, absent, or on leave.
- To process leave requests more efficiently and approvals by enabling employees to submit leave request applications, allowing managers to review and approve and reject the application, and HR to review the request.

### **III. SCOPE AND LIMITATIONS**

In this section it defines the functionalities that are included in the system as well as the features that are not part of the system.

#### **Scope**

This system includes the following functionalities and features:

- User authentication and authorization that allows users to securely log in and access the system based on their assigned roles.
- Employee management enables the creation, updating, and viewing and also deletion of the employee records in the system.
- Department management, which allows organization and assignment of employees to a specific recorded department in the system.

- Attendance tracking, which allows the employee to record their attendance time in and out and monitor their attendance status, ensuring correct recording of attendance.
- Dashboard and reporting that provides an overview of system data and generates reports for HR monitoring
- A role-based access control that restricts system access based on their user roles, such as admin, HR staff, manager, and employee for more role-based applications.
- Search and filtering functionality that allows users to easily find and track employees and department attendance records, leave records based on specific date, name, department.
- User profile management that allows users in any roles to update their personal information and account details.

### **Out of scope/Limitations**

The system does not include the following functionalities:

- Payroll processing, which is salary computation and financial transaction, is not part of the system.
- Biometric device integration in attendance recording, as the recording of attendance is done manually within the system.
- Recruitment and applicant tracking that are outside the scope of this system.

- Advanced performance analytics, such as detailed employee performance evaluation and predictive analysis.

#### **IV. USERS AND ROLES**

In this section, it defines the different types of users and roles within the system and their corresponding roles and responsibilities. Each user is assigned a specific permission to ensure proper access and control of the system that also aids in the system security.

##### **Admin**

The Admin has full control over the system and is responsible for overall system management. The admin has the following control over:

- Managing all user accounts
- Managing all employee records
- Viewing all system reports
- Configuring system settings

##### **HR Staff**

The HR Staff is responsible for handling employee-related operations and maintaining HR data. The HR staff has the following control over:

- Adding and updating employee records
- Managing departments and positions
- Reviewing attendance and leave requests
- Generating HR reports

##### **Manager**

The Manager supervises employees within a specific department and is responsible for monitoring and approval tasks. The manager has the following responsibilities:

- Viewing employees under their assigned department
- Approving or rejecting leave requests
- Monitoring attendance of assigned staff

### **Employee**

The Employee has limited access and can only manage their personal information and requests. The employee has the following control over:

- Viewing their personal profile
- Viewing their attendance history
- Submitting a leave requests
- Tracking their leave request status

These roles ensure that system access is properly controlled based on user responsibilities, supporting secure and efficient system operations.

## **V. FUNCTIONAL REQUIREMENTS**

In this section it describes the main features of the system and defines how each module supports the overall performance of the employee management system (HRIS).

### **V.1 Authentication Module**

This module is responsible for managing the user access to the system. This ensures that only authorized users can access and can log in in the system and also access the system features based on their assigned roles. This module is important in the system because it maintains the security and protecting sensitive informations.

Features:

- Allow users to log in to the system
- Allow users to log out securely
- Ensure password security through hashing
- Implement role-based access using middleware
- Enable users to manage their profile information

Laravel MVC Mapping:

- Model: User
- Controller: AuthController
- View: Login, Register, and Profile page

## **V.2 Dashboard Module**

This module provides an overview for key HR data and system activities. This allows users, especially HR staff and managers to quickly monitor important records or information and make informed decisions based on the real time summaries.

Features:

- Display total number of employees
- Display total number of departments
- Show employees present for the current day
- Display pending leave requests
- Show recent HR-related activities

Laravel MVC Mapping:

- Model: Employee, Department, Attendance, LeaveRequest
- Controller: DashboardController
- View: Dashboard page

## **V.3 Employee Management Module**

This Module handles the storage and maintenance of employee information. This serves as the central component of the system, allowing HR staff to manage employee records efficiently and keep all relevant information updated and organized.

Features:

- Add new employee records
- Edit existing employee information
- Delete employee records
- View detailed employee profiles
- Search and filter employee records
- Assign employees to departments

Fields:

- Employee ID
- First Name
- Last Name
- Email
- Phone Number
- Address
- Department
- Position
- Hire Date
- Employment Status

Laravel MVC Mapping:

- Model: Employee
- Controller: EmployeeController
- View: Employee list, create, edit, and details pages

#### **V.4 Department Management Module**

This Module is responsible for organizing employees into different departments within the organization. It helps maintain a clear structure and allows better management of employees based on their assigned roles and departments.

Features:

- Add new departments
- Edit department details
- Delete departments
- View department list
- Assign a manager to each department

Fields:

- Department ID
- Department Name
- Description
- Manager ID
- Status

Laravel MVC Mapping:

- Model: Department
- Controller: DepartmentController
- View: Department list and form pages

## **V.5 Attendance Management Module**

The Attendance Management Module tracks the daily attendance and work status of employees. It helps HR staff and managers monitor employee punctuality and attendance patterns, which are important for evaluating performance and ensuring accountability.

Features:

- Record employee time-in
- Record employee time-out
- View attendance history
- Assign attendance status (Present, Late, Absent, On Leave)
- Filter attendance by date or employee

#### Attendance Status:

- Present
- Late
- Absent
- On Leave

#### Fields:

- Attendance ID
- Employee ID
- Date
- Time In
- Time Out
- Status
- Remarks

#### Laravel MVC Mapping:

- Model: Attendance
- Controller: AttendanceController
- View: Attendance list and form pages

### **V.6 Leave Request Module**

This module manages the process of employee leave applications and approvals. This allows employees to submit leave requests and enables managers or HR staff to review, approve, or reject these requests, ensuring a structured workflow.

Features:

- Submit leave requests
- Approve leave requests
- Reject leave requests
- View leave request history
- Track leave request status

Fields:

- Leave Request ID
- Employee ID
- Leave Type
- Start Date
- End Date
- Reason
- Status
- Approved By

Laravel MVC Mapping:

- Model: LeaveRequest
- Controller: LeaveRequestController
- View: Leave request list, create, and details pages

## **V.7 Reports Module**

In this module it generates summarized information that helps HR staff and management monitor employee data and system activity. These reports support decision-making and provide insights into workforce trends and performance.

Features:

- Generate employee list reports
- Generate attendance summary reports

- Generate leave request reports
- Generate department-based reports
- Generate monthly HR activity reports

Laravel MVC Mapping:

- Model: Employee, Department, Attendance, LeaveRequest
- Controller: ReportController
- View: Reports dashboard
- 

## **VI. NON- FUNCTIONAL REQUIREMENTS**

In this section the non-functional requirements are defined, this is the quality attributes of the system, including its performance, security, and usability. These requirements ensure that the system operates efficiently and provides the user a good experience.

- The system is accessible a web browser.
- The interface is responsive and user-friendly.
- Passwords are securely stored using hashing.
- Only authorized users can access protected modules.
- Data is stored in a relational database.
- The system supports efficient CRUD operations.
- The application follows Laravel coding standards.

Through these non-functional requirements it ensures that the system is secure, reliable, and user-friendly, ensuring that it meets the performance requirements and usability expectations of the users.

## VII. DATABASE TABLES

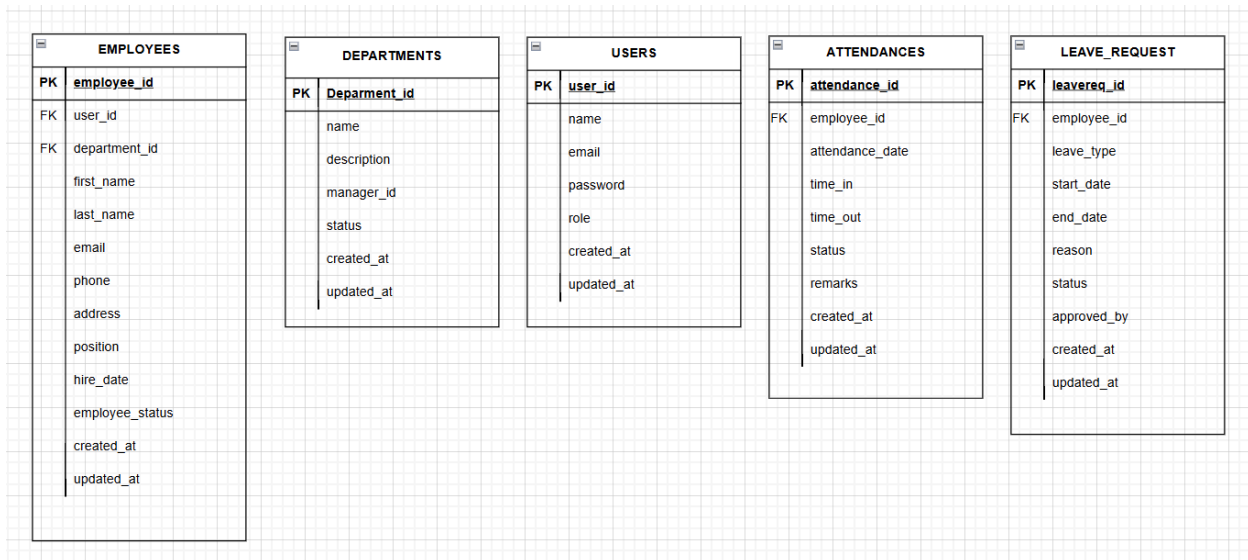

Figure 1. Database Tables

## VIII. ENTITY RELATIONSHIPS/ERD

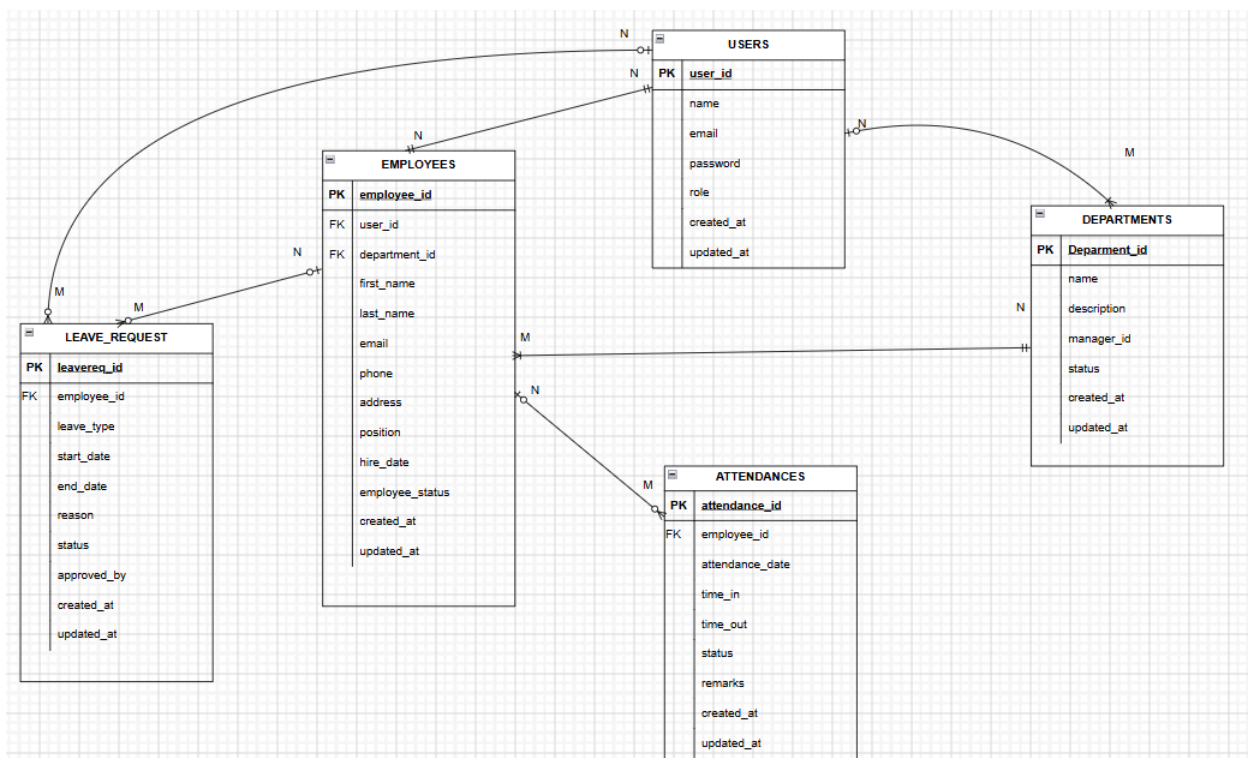

Figure 2. ERD

- One department can have many employees
- One employee belongs to one department
- One employee can have many attendance records
- One employee can submit many leave requests
- One manager can approve many leave requests
- One user account may be linked to one employee profile

## **IX. BUSINESS RULES**

This section defines the guidelines and constraints that the system follows to ensure proper operation, data integrity, security, and compliance with user roles.

- Only authenticated users can access the system
- Only admins can manage user accounts
- Every employee must belong to one department
- Attendance entries must be linked to a valid employee
- A leave request must have a valid start date and end date
- Approved leave requests can only be changed by authorized users
- Reports must only display data allowed by user role
- An employee profile email must be unique

## **X. VALIDATION RULES**

This section defines the validation rules applied to the system's input fields to ensure data accuracy, consistency, and integrity.

### **Employee**

- First name: required
- Last name: required
- Email: required, valid, unique
- Department ID: required
- Position: required

## Attendance

- Employee ID: required
- Attendance date: required, date
- Status: required

## Leave Request

- Employee ID: required
- Leave type: required
- Start date: required, date
- End date: required, date, after\_or\_equal:start\_date
- Status: required

## **XI. VIEWS**

This section lists the main pages of the system that the user interacts with. These views provide access to core functionalities such as employee management, attendance tracking, leave processing, department organization, reporting, and system navigation.

- Login page
- Dashboard
- Employee list
- Add employee form
- Edit employee form
- Employee details page
- Department list
- Attendance list
- Leave request page
- Reports page

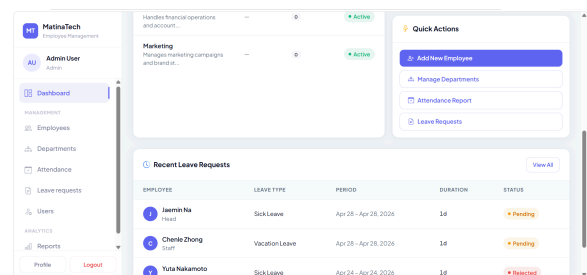

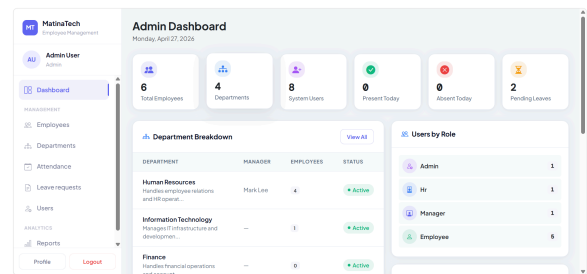

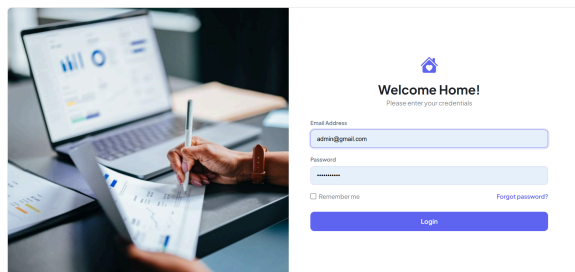

## **XII. DEVELOPMENT TOOLS**

In this section it lists the tools that were used to develop and implement the system.

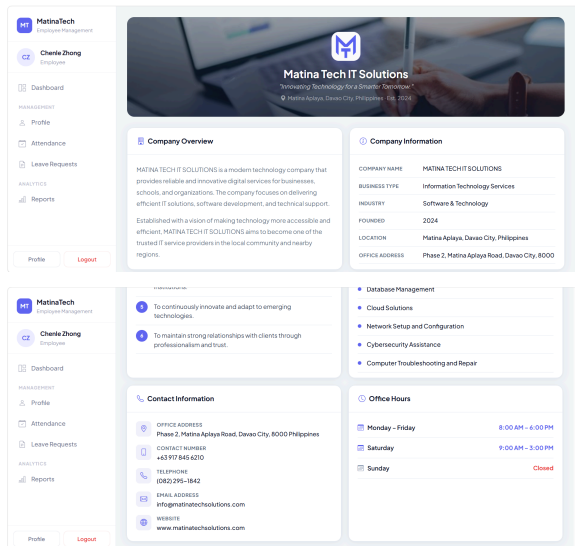

- Laravel
- Blade templating engine
- Eloquent ORM
- MySQL or PostgreSQL
- Bootstrap or Tailwind CSS
- Laravel migrations and seeders

The screenshot shows the 'Create New User' form in the MetatTech HR Management System. The sidebar on the left contains the following menu items: Dashboard, EMPLOYEES, Employees, Departments, Attendance, Leave requests, Users (highlighted), ANALYTICS, and Reports. The main content area has a header 'Create New User' with the subtitle 'Add a new HR or Manager account'. Below this is a 'User Details' section with two columns. The left column contains 'FULL NAME' (with a text input field containing 'e.g. Juan Dela Cruz') and 'PASSWORD' (with a text input field containing '\*\*\*\*\*'). The right column contains 'EMAIL' (with a text input field containing 'admin@gmail.com') and 'ROLE' (with a dropdown menu showing 'HR'). At the bottom of the form are two buttons: 'Create User' (with a plus icon) and 'Cancel'.
